Design

Full Featured User Interface

An extremely easy to use, powerful software designed by Kirk-Rudy's own software engineers for operating our high-speed inkjet printers.

1 Use the Ribbon tabs to step through setting up a job.

The Ribbon is the area at the top of the window, which groups all of the features in the program grouped into related areas.

2 Open the Job Settings or System Management dialogs to set up a system.

Job Settings - When you need to change resolution or specify sort settings.

System Management - When you need to purge ink, check ink levels, or configure a system.

3 Click the Kirk-Rudy Button to do something with your project.

The Kirk-Rudy Button contains all of the features that are used to open, save, or start a new job.

4 Loaded with new features

A single software platform across inkjet systems allows Kirk-Rudy to rapidly add powerful new features.

- Color and grayscale image support
- Static and dynamic PDFs
- Visual job browser
- System Doctor that monitors system
- Text/image/barcode/PDF rotation
- Ink Cost Calculator
- Rich textbox
- Extensive database support:
 - Access, dBase, Excel, FoxPro, Comma, Tab, Fixed, Label
